

## Countermeasure Data Management System (CDMS)

### Release Notes

Release Date: January 21, 2021

Release Number: 7.3.1g

CDMS is a software application located on the New York State Department of Health (NYSDOH) Health Commerce System (HCS). The application provides local, regional, state health departments and tribal nations with a single data reporting tool that may be used regardless of the hazard or agent during a public health incident or event. Public health organizations across the state use CDMS to capture recipient demographic and visit information related to the distribution of countermeasure (e.g., immunizations, antibiotics, personal protective equipment) during clinical operations, community reception centers during a radiological incident, or in support of documentation needs during public health emergency preparedness exercises. Vaccination data entered in CDMS can be uploaded to the New York State Immunization Information System (NYSIIS) if needed.

The CDMS application also provides a mobile-friendly public registration site for users to register for events online (<http://www.health.ny.gov/gotoclinic>).

#### Enhancements:

- Ability for users with access to Recall Registration to resend a confirmation email to a registrant for POD and Test Site event types
- When a user attempts to cancel an appointment that is already cancelled, they will now receive a “Your request is being processed” page
- Google crawling has been disabled for operationID, dateID and kioskID links

#### Bug fixes:

- Fixed issue with reminder texts/emails being sent for cancelled appointments
- Removal of map on HCS application landing page to increase performance
